

NMI-style prediction/error matrix, top-10 as predicted positive

Cell class compares 2022 prediction with realized TG links in 2023-2026; number = hybrid score, parentheses = bridge count

iTE/TD donor concept

phase-transition entropy amplification		TP 1.00 (8)	TP 0.99 (8)	TP 0.98 (8)				FN 0.89 (6)	FN 0.87 (5)					0.88		
anti-freezing organohydrogel design		TP 0.96 (7)	TP 0.95 (6)			TP 0.97 (8)		FN 0.72 (3)			0.79					
dynamic crosslinked gel network	TP 0.99 (10)	FN 0.88 (5)				0.93		FN 0.60 (3)	FN 0.63 (3)	FN 0.85 (6)	0.74		FN 0.10 (0)			
moisture-gradient ion transport	TP 0.94 (6)	FN 0.82 (3)		FN 0.75 (4)		0.90	FN 0.92 (5)			0.83	FN 0.67 (3)	FN 0.87 (7)				
ion-pair complexation control				0.92	TP 0.96 (8)			0.79	FN 0.79 (5)		FN 0.88 (6)		FN 0.33 (2)	0.79		
cellulose nanofiber scaffold	TP 0.97 (7)	FN 0.89 (4)		0.88						0.79	0.74					
cation/ anion thermodiffusion asymmetry	FN 0.88 (4)	FN 0.76 (3)	FN 0.78 (4)		FN 0.79 (3)	0.78	FN 0.72 (3)			FN 0.62 (2)		FN 0.66 (3)				
high-entropy redox/ion coupling	FN 0.70 (3)	FN 0.50 (2)														
nanochannel-confined ion transport							FN 0.53 (2)									
convection-resolved resistance decomposition										FN 0.60 (3)						
ion-dipole interaction transport							FN 0.51 (2)									
thermoreponsive micellization p/ n conversion	0.82															
soft mixed ionic-electronic coupling	0.75															

- TP: predicted and realized
- FP: predicted only
- FN: missed but realized
- TN: neither
- not a candidate pair

TG anchor concept
